First Quarter 2014 Market Review

Positives

Continued slow and steady economic growth

- A bit slower in the first quarter due to weather (maybe offset in Q2?)
- Deleveraging continuing

Early stages of Taper generally accepted by marketplace

- Though priced in "normalization" of rates appears optimistic
- Developed world inflation is low
 - Allows Fed continued flexibility to work through Taper
- Emerging markets made some progress on adjustments
 - Finally experiencing positive flows and early signs of positive performance
- Volatility remains subdued and markets relatively stable

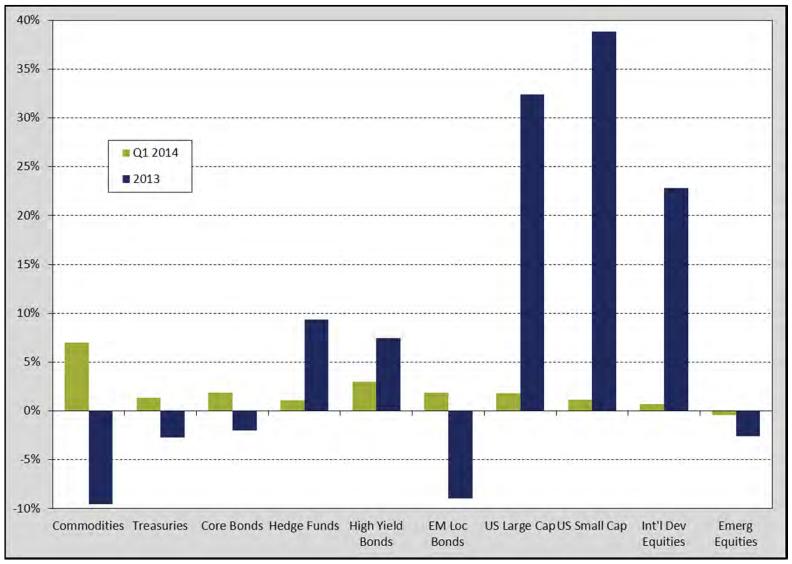

Negatives

Potential geopolitical instability

- Russian invasion of Crimea has minimal economic impact
- But tensions between Russia and West could have spillover effects
- Benign market environment in Europe obscures challenging underlying economic conditions
- Inflation is low...maybe too low
 - Global monetary stimulation has offset deflationary pressures
- Continued slowing growth in China has global implications
 - Could bring Chinese credit issues to forefront
- Valuations beginning to stretch above long-term averages
 - Developed Equity P-Es above median
 - Credit spreads approaching 2006-07 levels

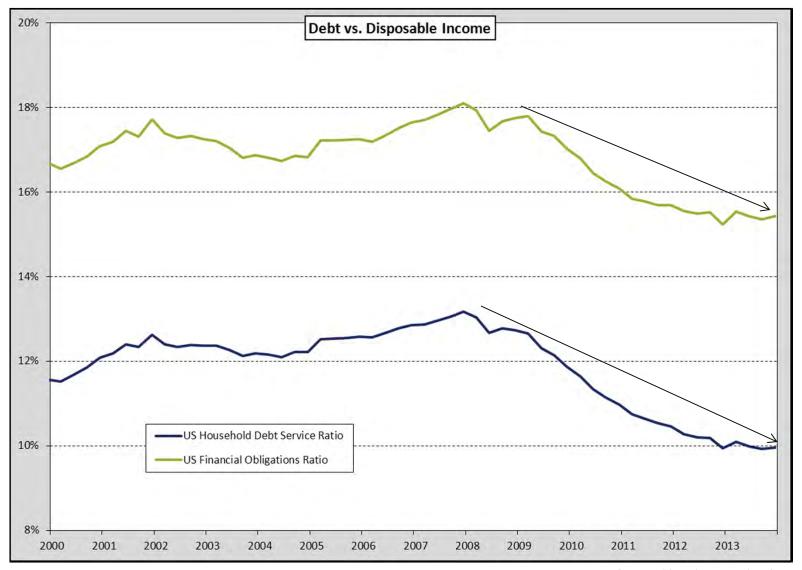

Markets Were Mostly Up (A Little Bit) In the First Quarter

Fixed Income Performance

Source: Bloomberg, as of 3/31/2014

Outlook

Markets have generally shown resiliency so far in 2014

- Withstood adjustments in balance of payment challenged EM countries
- Limited market reaction to Russia/Ukraine issues

US taper has generally been accepted by markets

- Already reduced from \$85 billion to \$55 billion in monthly purchases
- Rates remain low and accommodating

Slow and steady economic growth continues

Inflation remains subdued

Continued low volatility may obscure underlying economic challenges

- European peripheral countries continue to face high unemployment
- Many EM countries face further balance of payment adjustments
- China faces slowing growth and potential credit issues

· Valuations beginning to move beyond fair value

- While not stretched, equity P-E ratios are now above long-term averages
- Credit spreads continue to move tighter
 - Ex: European peripheral debt

NEPC themes remain consistent

- Rebalance remain diversified and balanced
- Look for opportunities to be dynamic particularly in credit
- Allocate to emerging markets and private markets for higher returns in low return world

Note: Plan attribution calculations are returns based and the results shown reflect the composites shown. As a result, the total returns shown may vary from the calculated returns shown on the performance report. The target return shown for each composite is a custom index, based on aggregated policy indices. This policy index asset weights the underlying policy indices of each option in the plan and the respective benchmark. The allocation, selection, and interaction effects are calculated using the custom index described above along with the policy or target weight of each composite.

May not add up due to rounding.

Note: Plan attribution calculations are returns based and the results shown reflect the composites shown. As a result, the total returns shown may vary from the calculated returns shown on the performance report.

The target return shown for each composite is a custom index, based on aggregated policy indices. This policy index asset weights the underlying policy indices of each option in the plan and the respective benchmark.

The allocation, selection, and interaction effects are calculated using the custom index described above along with the policy or target weight of each composite.

May not add up due to rounding.

Table of Contents

What helped performance

- US stocks posted modest gains in the three months ended March 31, 2014, but there was a shift in dynamics, especially in the final week of the quarter. Following a strong 2013, stocks started the year with a drop in January amid concerns regarding the Fed tapering. They rebounded in February, hitting new record highs, on the heels of the Fed stating it would maintain current short-term interest rates near zero well beyond unemployment dropping below 6.5%, especially if inflation remains below 2%. Equities oscillated again in March, falling after the Fed touched on the possibility of raising interest rates.
 - SSgA S&P 400 returned 3.0%, the Large Cap Composite 2.0% in the first guarter.
- While International equities lagged US markets, returning 0.7%, as measured by the MSCI EAFE Index, but managers in the VPIC portfolio outperformed.
 - Acadian returned 4.6% and Mondrian returned 3.7% helping the International Equity Composite return 3.6% for the quarter.
- Bond markets rallied in the first quarter, seemingly moving beyond the challenges faced by a majority of fixed income sectors in 2013. Early in the quarter, investors snapped up safer, higher-quality assets amid concerns around an economic slowdown in China and the unseasonably harsh winter in the US. This flight to quality was further reinforced following the crisis in Ukraine and Russia taking control of Crimea. A small portion of the gains in Treasuries was lost in March when markets interpreted Janet Yellen's first statements to Congress as Fed chairwoman as a signal that the Fed may increase the federal funds rate earlier than expected.
 - The US Fixed Income Composite returned 2.2% in the first quarter, the High Yield Composite returned 2.9% while Wellington Opportunistic Emerging Market Debt returned 3.7%.
- AQR performed well in the first quarter returning 5.7%, with Nominal Interest Rate Risk contributing 2.4%
 Inflation Risk adding 2.3% and Credit/Currency Risk contributing 1.0%.

Total Plan Performance Analysis

What hurt performance

- Mellon Global Expanded Alpha severely underperformed in the first quarter. GEA I posted a Q1 return of -4.6% compared to a blended benchmark return of 2.0%. The Strategy's 5-yr return and since inception return remain above the benchmark but quarterly underperformance of this magnitude severely impacts the 1-yr and 3-yr numbers.
 - The underperformance can be traced to 3 specific themes/positions; long equity positions in Hong Kong and Japan, short exposure to the Australia Dollar, long German Equities and short Spain/Italy equities. Collectively these themes contributed 370 basis points of underperformance in the quarter.
- In anticipation of rising interest rates, investors sold their positions in small caps, fast-growing stocks
- and non-earners, while moving into stocks of more moderately-valued, stable companies exhibiting cyclical growth. Both Champlain and Wellington slightly underperformed their benchmark in the first quarter
 - Champlain returned 1.4% vs the Russell 2500 return of 2.3%, Wellington returned 1.5% while the Russell 2000 Value returned 1.8%.

Manager Performance Analysis

T. Rowe Price – Large Cap Core

- What Helped: Within the S&P 500 Index, sector performance was mostly positive. Utilities produced strong returns and far outpaced other sectors
- What Hurt: Stock selection within the consumer staples sector had the largest negative impact on relative performance

SSgA S&P 500 Equal Weighted – Large Cap Core

- What Helped: Utilities had the highest quarterly return at 9.74%
- What Hurt: Consumer Discretionary had the lowest quarterly return at -1.398%

Wellington – Small Cap Value Equities

- What Helped: Stock selection, which displayed more dispersion across the sectors, was positive to performance for the quarter
- What Hurt: Sector allocation, a residual of the stock selection process, was the primary source of underperformance for the quarter

Champlain – Mid Cap Core Equities

- What Helped: Led by Whiting Petroleum, energy holdings contributed slightly to this quarter's relative performance
- What Hurt: Weak relative performance from industrials was responsible for just under a third of the overall relative performance deficit this quarter

SSgA Russell 2000 Growth – Small Cap Growth Equities

- What Helped: Utilities holdings outperformed by 0.10%
- What Hurt: Telecommunication Services holdings underperformed by 0.35%

Acadian - Int'l Developed Equities

- What Helped: Stock selection added 420 basis point of performance, led by names in Japan and France
- What Hurt: Country allocations reduced performance by 50 basis points, including an underweighting to the U.K. and Australia

Mondrian - Int'l Developed Equities

- What Helped: Overweight Israel and underweight Japan, stock selection in France and Japan, stock selection in financials and industrials sectors
- What Hurt: Stock selection in the UK and Italy, underweight Denmark, overweight position in the telecommunication services sector

Aberdeen – Emerging Market Equities

- What Helped: Outperformance was partly due to the overweight to several markets India, Indonesia and Brazil – which rebounded from previous sell-offs amid improvement in their current accounts.
- What Hurt: Weak performance from Brazilian holdings pared gains. Cyclical stocks such as Vale and Petrobras continued to lag, although both companies rebounded strongly towards the end of the period as risk appetite improved.

Allianz - Core Fixed Income

- What Helped: With bonds on the rise in the first quarter amid choppy conditions in the equity and volatility markets, Structured Alpha 10 Year Treasury 500 outperformed its benchmark
- What Hurt: Magnitude of the equity and volatility markets' moves was quite typical, the speed of the rebound made it difficult for the portfolio to fully capitalize on opportunities to generate stronger excess returns,

PIMCO - Core Plus Fixed Income

- What Helped: Tactical exposures to Italian and Spanish debt, which rallied on improving economic data, an allocation to non-Agency mortgages, exposure to Build America municipal bonds as spreads tightened amid investor demand for attractive yields and modes exposure to Mexican local interest rates as yield declined amid lower inflation
- What Hurt: An underweight to the long-end of the U.S. yield curve, as longer maturity yields declined, An underweight to U.S. duration as yields declined across most maturities, An underweight to investment-grade corporate bonds which outperformed like-duration Treasuries

PIMCO - Unconstrained

- What Helped: Roll-down1 from front-end U.S. rate strategies, including Eurodollar futures and short-dated Treasuries, U.S. interest-rate swaption sales, exposure to Treasury Inflation-Protected Securities (TIPS) as real rate decreased
- What Hurt: Negative duration exposure at the long-end of the U.S. yield curve, as long-term rates fell, Foreign currency exposure was slightly negative, driven by long positioning in the Mexican peso

Schroders – Commodities

- What Helped: Returns by sector for the quarter were agriculture 12.3%, precious metals 4.3%, energy 2.3%, and base metals -4.1%. The best five performers were coffee 61%, lean hogs 48%, corn 19%, wheat 15%, and nickel 15%.
- What Hurt: The worst performing markets on the quarter were copper -10%, lead -7%, lumber -7%, gas oil -5% and heating oil -5%.

KDP – High Yield Debt

- What Helped: The biggest industry contributors to positive performance this quarter were Integrated Telecom, Media-Cable, Consumer/Commercial/Lease Financing, Building & Construction, and Support Services
- What Hurt: Metals & Mining was the only contributor of negative performance

Mondrian - Global Fixed Income

- What Helped: Overweight to Mexico and underweight to Canada
- What Hurt: The underweight to the Eurozone and the peripheral markets of Spain and Italy in particular detracted from performance. Additionally, the overweights to Poland, Sweden and the United States also detracted from performance

Wellington – Opportunistic Emerging Market Debt

- What Helped: In Mexico, positive security selection, namely our preference for the long-end of
- the external sovereign debt curve as well as allocation to long dated local sovereign debt contributed to overall performance.
- What Hurt: In Russia, both an overweight country allocation earlier in the period and negative security selection, namely, an allocation to local sovereign debt hurt overall performance

Wellington – Diversified Alpha Strategies

- What Helped: Five of eleven strategies contributed positive alpha during the period. International Contrarian Value, Long/Short Country Alpha, and Healthcare were the largest sources of outperformance.
- What Hurt: Special Equity, Government Relative Value, and Select Rates Relative Value were the primary detractors over the period.

Mellon Global Expanded Alpha I - Global Asset Allocation

- What Helped:
- What Hurt: Underperformance can be traced to 3 specific themes/positions; long equity positions in Hong Kong and Japan, short exposure to the Australia Dollar, long German Equities and short Spain/Italy equities. Collectively these themes contributed 370 basis points of underperformance in the quarter

PIMCO All Asset - Global Asset Allocation

- What Helped: Exposure to international developed and emerging markets equities via fundamentally weighted strategies, allocation to Real Estate Investment Trusts (REIT) and diversified commodities, high yield credit and non-Agency mortgages and allocations to liquid alternative strategies which target low beta or market-neutral relative value exposures
- What Hurt: Exposure to emerging market (EM) equities as strong performance in the second half of the quarter was offset by a weak start to the quarter

Wellington OIF - Global Asset Allocation

- What Helped: Positive security selection in Mexico, an allocation to sovereign debt in Slovenia, positive security selection in Venezuela and Brazil and both an overweight country allocation and positive security selection in Indonesia
- What Hurt: Both an overweight country allocation and negative security selection in Russia, poor security selection in Peru, an overweight to Latvia and both an overweight country allocation and negative security selection in Hungary.

AQR Global Risk Premium – Global Asset Allocation

- What Helped: Returns for two of the four risk categories in the Fund were positive for the quarter, with Equities contributing +2.2% and Credit contributing +1.7%.
- What Hurt: Nominal Interest Rates subtracted -1.2% and Inflation Sensitive assets subtracted -0.9%.

Due Diligence Monitor

PIMCO

- PIMCO announced that Mohamed El-Erian, co-CIO and CEO is stepping down in March of 2014. They separately announced that Chris Dialynas, manager of the Unconstrained Bond Fund, will be taking a sabbatical later this year. Several additional appointments have also occurred within the senior leadership team as summarized below:
 - Deputy CIO Appointments: These are new positions created following the resignation of Mr. El-Erian
 - Mark Kiesel (Credit)
 - Virginie Maisonneuve (Head of Global Equities, recent hire from Schroders)
 - Scott Mather (Head of Global Portfolio Management)
 - Mihir Worah (Head of Real Return Portfolio Management)
 - Andrew Balls, and Dan Ivascyn (named last week as Deputy CIOs following the announcement regarding Mr. El-Erian)
 - Investment Committee Changes:
 - Marc Seidner, resigned to take a role outside of PIMCO at GMO
 - Existing members Bill Gross, Saumil Parikh, Andrew Balls, and Christian Stracke remain on the IC
 - New IC members include the newly named Deputy CIOs and Tony Crescenzi
 - Mohit Mittal and Qi Wang remains as Rotating IC members
 - · Other Items:
 - IC Member, Chris Dialynas has decided to delay his planned sabbatical from the Firm until the end of April
 - Rich Clarida will take over leadership of the Secular Forum
 - Ed Devlin, who heads Canadian portfolio management for the firm, will move to the New York office where he will assume greater responsibilities as a generalist PM
 - Chuck Lahr, a Managing Director and Equities Portfolio Manager, has decided to leave the firm to pursue other interests
 - Sudi Mariappa will rejoin PIMCO as a Managing Director and Portfolio Manager; Sudi returns to PIMCO after a 2 year stint with GLG based in London
- In the near-term, we believe the recent changes will not degrade PIMCO's investment process and capabilities. However, concerns arise due to the turnover at the highest levels of PIMCO's leadership and the potential impact that may have on the Firm's culture and the long-term succession plan for CIO, Bill Gross.
- While NEPC believes no action is required, we are closely monitoring the situation, and we recommend Watch status at the Firm level for all PIMCO strategies.

Manager Characteristics

T. Rowe

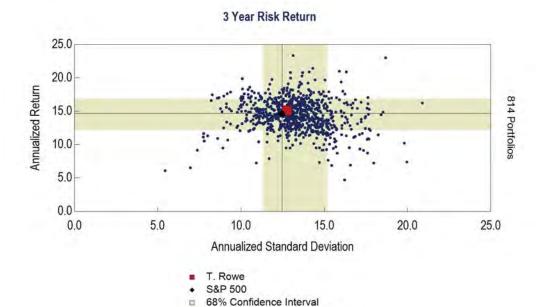

T. Rowe Price employs a fundamental, bottom-up approach to investing in equity assets. The strategy delivers a research portfolio managed by the firm's industry analysts and representing their best ideas. The Structured Research Strategy seeks to provide superior long-term returns and capture the style of the S&P 500 Stock Index by combining analyst-driven research and security selection with the benefits of disciplined portfolio construction. T. Rowe Price's approach results in an industry and sector neutral portfolio that aims to consistently and reliably provide alpha through bottom-up, fundamental research and stock selection, consistent excess returns, index like return volatility, low tracking error (below 175bps), and a high information ratio.

SSgA S&P 500 Cap-Wgt

Using a replication process, we purchase each security for the Strategy in the same capitalization weight as it appears in the S&P 500 Index. Replication results in low turnover, accurate tracking, and low costs. SSgA's internal liquidity has allowed the firm to acquire many of the benchmark constituents for free. These free trading opportunities have allowed SSgA to gradually reduce security-level misweights while avoiding the open market. This process has resulted in portfolios that look and behave like the benchmark, and do so at a very low cost. SSgA's passive equity process objective is to remain fully invested in the equity market at all times. To accomplish this, it holds a small amount of unleveraged exchange-traded S&P 500® futures contracts to maintain full exposure. SSgA tends to hold approximately 1-3% of the strategy's value in suitable CFTC approved index futures contracts. This position in futures also allows the firm to accommodate cash flows into and out of the portfolio on a daily basis and to equitize dividend receivables to achieve closer tracking.

SSgA S&P 500 Equal-Wgt

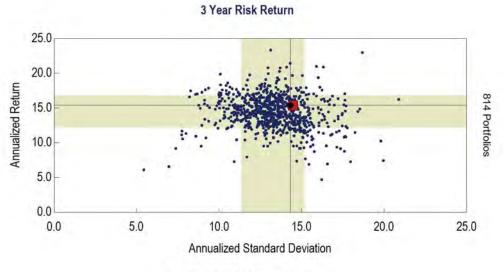

The Strategy is managed using a "passive" or "indexing" investment approach, by which SSgA attempts to match, before expenses, the performance of the Index. SSqA will typically attempt to invest in the securities comprising the Index, in the same proportions as they are represented in the Index. In some cases, it may not be possible or practicable to purchase all of the securities comprising the Index, or to hold them in the same weightings as they represent in the Index. In those circumstances, SSqA may employ a sampling or optimization technique to construct the portfolio in question. From time to time securities are added to or removed from the Index. SSgA may sell securities that are represented in the Index, or purchase securities that are not yet represented in the Index, in anticipation of their removal from or addition to the Index. The Strategy may at times purchase or sell futures contracts on the Index, or options on those futures, or engage in other transactions involving the use of derivatives, in lieu of investment directly in the securities making up the Index or to enhance the Strategy's replication of the Index return. The Strategy's return may not match the return of the Index.

Champlain

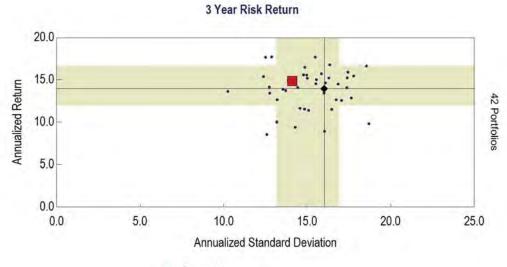

Champlain employs a fundamental, bottom-up approach to investing in equity assets. They believe that superior companies purchased at attractive valuations have the highest probability to wealth creation. Champlain seeks strong businesses with credible and sincere management and aims to buy shares of their stock at discounts to fair or intrinsic value. Portfolio construction applies sector weight quidelines and position size rules to manage risk. The portfolio will have some exposure to at least seven out of the eight largest sectors of the S&P 400, with a maximum weighting on 25% in any one sector. Individual positions will not represent more than 2% of the respective companies' outstanding shares and are limited to no more than 5% of assets under management. The portfolio typically holds 50-75 securities with average position sizes of 2%. The strategy's minimum market cap is \$1.5 billion at purchase and a maximum market cap of \$15 billion. In general, no more than 10% of portfolio in stocks with a market cap below \$2B and no more than 5% of portfolio in companies with market cap above \$20B.

Wellington

Wellington's investment objective is to seek long-term total returns in excess of the Russell 2000 Value Index by investing in conservatively-valued securities of high-quality, small cap companies. Wellington employ a bottom-up stock selection process that utilizes Wellington Management's proprietary, fundamental research to identify undervalued companies that have the potential for significant longer-term rewards. The investment universe consists of all stocks generally between US\$100 million and US\$2 billion in market capitalization. These stocks are reviewed for certain financial and valuation requirements that correspond with our investment process and philosophy. The Small Cap Value Team conducts their own proprietary research and leverages the broader research of the firm as appropriate. The Portfolio is expected to have a lower P/E ratio and other value-oriented characteristics relative to the overall small cap market, with a similar market capitalization. The return on equity is expected to be higher than the small cap value indexes, consistent with the high-quality focus.

SSgA Russell 2000 Growth

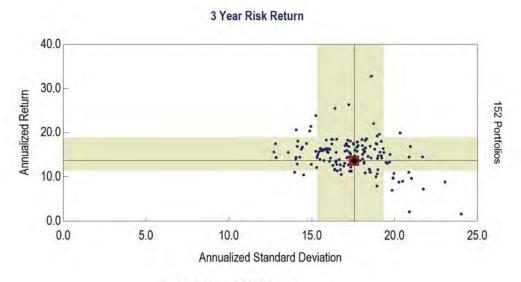

The Strategy is managed using a "passive" or "indexing" investment approach, by which SSgA attempts to match, before expenses, the performance of the Index. SSgA will typically attempt to invest in the securities comprising the Index, in the same proportions as they are represented in the Index. In some cases, it may not be possible or practicable to purchase all of the securities comprising the Index, or to hold them in the same weightings as they represent in the Index. In those circumstances, SSgA may employ a sampling or optimization technique to construct the portfolio in question. From time to time securities are added to or removed from the Index, SSqA may sell securities that are represented in the Index, or purchase securities that are not yet represented in the Index, in anticipation of their removal from or addition to the Index. The Strategy may at times purchase or sell futures contracts on the Index, or options on those futures, or engage in other transactions involving the use of derivatives, in lieu of investment directly in the securities making up the Index or to enhance the Strategy's replication of the Index return. The Strategy's return may not match the return of the Index.

Acadian

Acadian believes that the larger the pool of potential investments, the greater the potential opportunity an active manager has to add value. They believe that stocks and markets have many attributes that are related to potential outperformance, and that a successful investment approach must be multi-faceted and highly adaptable. They believe that objectivity is crucial to investment success. Acadian's quantitative process and extensive database allows them to apply their valuation techniques to over 40,000 stocks worldwide. They do not limit the universe other than to employ screens based on invest-ability and availability of data. For example, they only evaluate stocks that have sufficient daily trading volume to be appropriate for institutional investment. Other than these practical considerations, they consider our investment universe to encompass all institutionally investable stocks in the world.

Mondrian

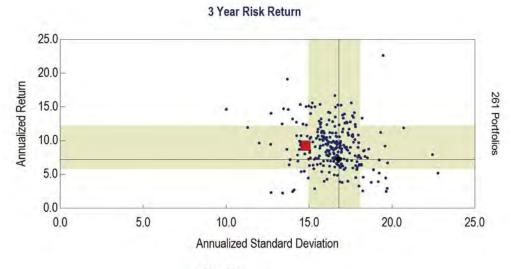

The firm is an active value-oriented defensive manager. The firm's value driven investment philosophy is based on the belief that investments need to be evaluated in terms of their fundamental long-term value. The firm believes that the value of a company lies in its future income stream as dividends represent the most direct form of cash flow to a shareholder. The firm uses an inflation adjusted dividend discount model to derive the underlying value of a company. This methodology is applied consistently to individual securities across all markets and industries. The universe spans markets covered in the MSCI Indices and those developing markets with adequate investor protection and good repatriation procedures. The firm will then narrow the universe to a list of more than 1000 securities on the basis of value criteria, and then further reduce this to a shorter list of approximately 250 securities annually, for detailed fundamental analysis. The screens include basic value characteristics such as price to book, price to cash flow ratio, price to earnings ratio, and yield, as well as liquidity considerations. A focus list of approximately 80 securities is then created from that list of approximately 250 through fundamental research and deliberations of the Equity Strategy Committee. It is this list of securities on which more detailed fundamental analysis and financial modeling is carried out utilizing the dividend discount model, which is based on an evaluation of a company's future income stream, which is then discounted in real terms.

SSgA ACWI Ex US

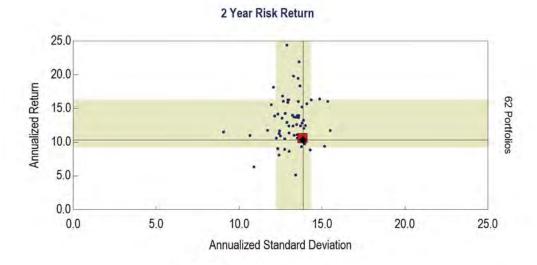

The MSCI ACWI ex US Index Strategy tends to hold each security that is held in the benchmark index, but the strategy will not be perfectly weighted in every index constituent on a daily basis. Holding securities in the perfect weights would require increased trading and therefore would incur costs. Thus, there will be securities in the fund that are either overor under-weighted relative to the benchmark. The individual security mis-weights are very minimal, usually within 1 basis point. However, in aggregate, these small mis-weights can add up and result in tracking error if the mis-weighted securities' performance is volatile. SSgA seek to replicate the index by attempting to hold every security in the fund in its appropriate index weight. SSgA trade only when there is a change to the Index, when we have participant cash flows, or when we receive significant dividend income into the fund.

Aberdeen

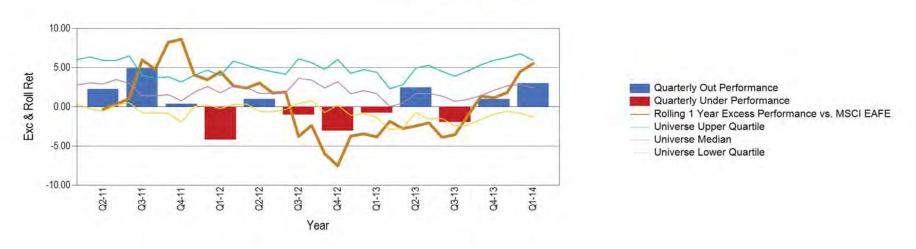

Aberdeen believes, given the inefficiency of markets, that competitive long-term returns are achieved by identifying high quality stocks at attractive valuations and holding for the long term. It is their belief that sound fundamentals drive stock prices over time. They employ a fundamental bottom-up investment approach based upon a rigorous and disciplined proprietary research effort which originates with direct company due diligence visits. Portfolios are constructed to maximize their level of exposure to the most attractive companies filtered from the stock selection process. They run a representative or model' unconstrained portfolio that contains approximately 30 - 70 stocks at any given time. Once a stock has received unanimous approval by the team, the senior investment team members then decide which portfolio category it should enter (i.e. country, regional, Global Emerging Markets) and at what weighting. The Head of Global Emerging Markets then has responsibility to ensure that the decision is implemented.

Allianz Structured Alpha

Allianz uses an alpha enhancement strategy that targets a return stream with low or no correlation with the underlying BC Aggregate benchmark. The objective of the fund seeks to deliver 5% net of fees annually on top of the benchmark with a tracking error of 2-4%. The strategy analyzes historical behavior of the S&P 500 Index and develops a distribution of expected returns, then the fund constructions profit zones using puts and calls which at expiration the underlying ends up in the profit zone. Strategies containing the buying or selling of options may produce losses and profits similar to leverage and may exposure the account to risk related to the underlying security and the option itself.

PIMCO Core Plus

PIMCO's investment process expects to generate above-benchmark returns by building diversified, risk-averse portfolios based upon their long-term secular outlook. This is achieved by analyzing fundamental global trends in such areas as political factors, inflation, volatility, growth, and currency, amongst others. The three to five-year secular outlook is the core element of their decision-making process, and serves as a framework for portfolio implementation. In applying the secular outlook to the portfolio, such tools as duration position, yield curve posture and sector allocation are expressed to best represent the firm's view on the macro-economic environment. Bottom-up analysis of specific securities is also an important part of the firm's philosophy. Bonds are evaluated on a rich/cheap basis and fundamental research determines strong portfolio candidates.

PIMCO Core Plus

3 Year Risk Statistics

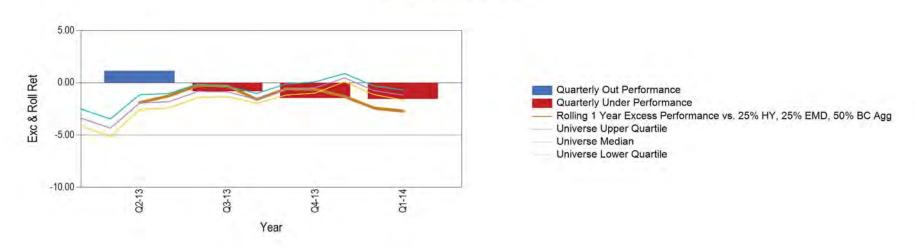

PIMCO Unconstrained

The PIMCO Unconstrained Bond Strategy is an absolute return-oriented, investment grade quality fixed income strategy that embodies PIMCO's secular thinking, global themes, and integrated investment process without the constraints of a benchmark or significant sector/instrument limitations. The strategy is designed to offer the traditional benefits of a core bond portfolio - seeks maximum long-term return consistent with capital preservation and prudent management- but with higher potential alpha and the potential to mitigate downside risk to a greater degree than what is reasonably possible from traditional active fixed income management approaches as the strategy allows for more manager discretion to adjust duration exposure, allocate across sectors and otherwise express the firm's active views. The strategy is governed by PIMCO's investment philosophy and unique, disciplined secular investment process, which focuses on long-term economic, social and political trends that may have lasting impacts on investment returns.

PIMCO Unconstrained

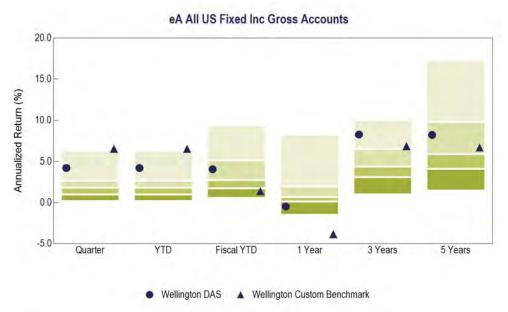

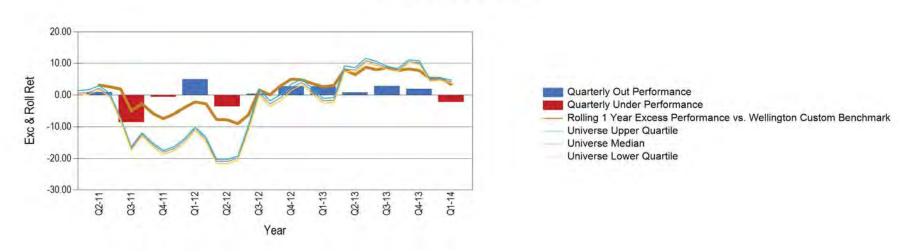

Wellington DAS

The objective of the Diversified Alpha Strategies - Absolute Return (DAS) Portfolio is to provide positive absolute returns over cash or other market exposure (beta) over rolling 3-year periods with expected volatility of 3 to 6%. The DAS Portfolio aims to provide consistent returns by investing in diverse, market-neutral alpha sources that have low or negative correlations with each other. The mix of alpha sources is rebalanced periodically, and the target mix may change over time. The DAS Portfolio can be combined with desired market (beta) exposure through the use of derivative instruments. Drawing on a diversified basket of alpha sources from across a broad investment universe, rather than a single alpha source, should increase the efficiency of the return/risk ratio and increase the likelihood of achieving consistent returns. For this reason, the DAS Portfolio includes a variety of alpha sources: market neutral equity and fixed income strategies, overlay strategies (currency, fixed income, asset allocation), and long-only equity strategies from which they try to remove structural market risk through short equity index future or swap positions. The allocation to each alpha source is determined in a contribution to risk framework in the context of the expected aggregate DAS Portfolio characteristics. The target weights of the underlying alpha sources have been set using risk budgeting, with a goal of achieving a balanced contribution to risk across the alpha sources, rather than focusing only on the absolute or percent cash allocation.

KDP

KDP believes that the key to delivering superior risk-adjusted returns lies in controlling credit risk. To do this the firm combines rigorous, bottom-up credit analysis with an active, top-down management approach that ensures a strong overall credit profile and broad portfolio diversification. KDP employs a value-oriented approach to investing that leverages our strong fundamental research capabilities, and seeks to take advantage of market inefficiencies and anomalies on an opportunistic basis in order to capture excess credit spread. KDP places a strong emphasis on issuer, industry and sector diversification, and tends to focus on larger companies, as they tend to be more resilient in times of difficulty and their securities tend to be more liquid. KDP uses a proprietary "Default Risk Ranking (DRR)" System to screen securities eligible for purchase in its portfolios. By assigning default risk probabilities to companies covered, the DRR system is used to identify securities that are overvalued or undervalued relative to the market. The firm minimizes portfolio volatility in part by investing in securities of companies that exhibit greater resilience in times of financial distress. KDP focuses on companies with good management, stable to improving earnings, good balance sheet liquidity and a strong competitive position in industries with favorable underlying fundamentals.

BlackRock TIPS

In the management of an inflation-linked bond portfolio, BlackRock will utilize multiple strategies to outperform the index. These include: duration and yield curve positioning, technical supply/demand anomalies related primarily to the ILB auction cycle, seasonal factors related to non-seasonally adjusted inflation-linked indices, break-even spread between ILBs and nominal securities, and, if applicable, sector and country allocation. The team compares nominal yields with real yields and factor in their views on inflation. If the yield spread is less than the inflation rate, then ILBs are considered to trade cheaply to nominal bonds and have greater relative value. The portfolio currently holds about 31 positions, out of 27-29 issues in the benchmark. Turnover is moderate, at around 100-150%.

Mondrian GFI

Bond yield for each market minus Mondrian's inflation forecast for that country. Mondrian will consider investing in the government debt of all countries within the Citigroup World Government Bond Index and other developed world bond markets. Within the emerging world most countries are researched and will include dollar denominated and local currency issuers. Mondrian's bond universe is constructed by selecting a range of bonds from the aforementioned regions at varying maturities, according to Mondrian's credit, liquidity and other specific criteria. A total of 150-200 issues are followed closely, although this list is not intended to be exhaustive. Mondrian bases its duration strategy on the size of potential long term "real" returns in a country's local market. This approach means that in practice, portfolio durations change gradually over time, and that Mondrian does not attempt to anticipate frequent interest rate changes. Mondrian's Credit Committee, chaired by John Kirk is responsible for sector recommendations in the various international markets. Each sector is assigned a prospective credit rating and current yield differentials where comparable government bonds are then assessed for their attractiveness. Mondrian seeks to add value through the use of non-governmental debt, although corporate bonds are a small part of the strategy and contribute a small portion to excess returns. Typically, sovereign and supranational issues comprise between 70% to 100% of a portfolio. High-quality foreign corporate debt is utilized, and may represent between 0% to 30% of a portfolio. In the case of corporate debt, the upper limit of 30% is strictly adhered to. A portfolio will typically hold between 30 and 40 securities.

Comparative Country Weights

Wellington Opportunistic Emerging Market Debt

- -The Opportunistic Emerging Markets Debt investment approach seeks to generate attractive returns relative to an emerging markets debt benchmark such as the J.P. Morgan Emerging Markets Bond Index Global (EMBI Global), or similar, independent of traditional benchmark constraints.
- -Disciplined investment approach that integrates systematic research from both quantitative and fundamental perspective. Risk Management Due to the credit, currency, and local interest rate risks inherent in investing in these markets, and the structural complexity of some emerging markets debt instruments, a comprehensive system of risk controls is required to manage risks such as sovereign and corporate defaults, local currency volatility, and local debt yield curve inversions.
- -The investment process begins with a thorough assessment of global economic, liquidity, and market conditions. Wellington combines comprehensive top-down quantitative and macroeconomic analysis with bottom-up sovereign credit research to identify key global factors and to determine the potential impact on emerging markets debt. The resulting market outlook determines the overall risk level of the portfolio.
- -Opportunistic Emerging Markets Debt is an unconstrained, best ideas approach that takes advantage of investment opportunities in emerging markets sovereign, corporate, and local markets to generate attractive total returns. It is managed by the same team that has been responsible for the Emerging Markets Debt approach since its inception.

Mellon Global Expanded Alpha I (Global Asset Allocation)

-The core philosophy behind Mellon's Global Expanded Alpha strategy is that global capital markets are an orderly and mostly rational structure over the long term and that prices reflect expected returns based on fundamentals. However while equilibrium exists there are factors in the capital markets which cause prices to deviate from the equilibrium. Mellon seeks to diversify investment exposure across many asset classes. Global Stocks, Global Bonds and Currencies are the broad asset classes in which Global Alpha 1 is exposed. Mellon determines expected returns, risks, and correlations for each asset class in the twelve major capital markets (Australia, Canada, France, Germany, Hong Kong, Italy, Japan, the Netherlands, Spain, Switzerland, the U.K., and the U.S.) where they actively allocate assets. Model has been expanded to new alpha sources: emerging markets and commodities. Alpha in the emerging market is extracted through both emerging market equities and currencies. Emerging market equity and currency models rely on similar signals to those employed in developed equities and currencies models. Relative Valuation is the basis for asset class investment decisions. Investment instruments used include Futures, Forwards, Options and Asset Class Funds. Mellon is capable of taking Long/Short positions in any instruments but must be Net Long Stocks and Bonds.

Source: PIMCO

PIMCO All Asset

- -PIMCO's All Asset Fund uses a Fund of Mutual Funds approach. Investment funds are continuously reallocated between various PIMCO Mutual funds base on strategic allocation decisions made by the advisor to the investment manager.
- Because both by policy and practice fixed income related securities tend to dominate the All Asset Funds asset allocation, and also because historical risk return measures correlate highly to core fixed income portfolio's. This investment may be categorized as either global asset allocation or core fixed income.
- -The underlying funds may at times invest in derivatives. Use of these instruments may involve risks such as liquidity risk, interest rate risk, market risk, credit risk, management risk and the risk that a fund could not close out a position when it would be most advantageous to do so. Portfolios investing in derivatives can lose more than the principal amount invested.
- -Shares of mutual funds that invest in Treasuries, TIPS and Government Bonds do not have the same guarantees as direct investments in these securities. Mortgage-backed securities are subject to prepayment risk. With corporate bonds there is no assurance that issuers will meet their obligations. An investment in high-yield securities generally involves greater risk to principal than an investment in higher-rated bonds. Investing in non-U.S. securities may entail risk as a result of non-U.S. economic and political developments, which may be increased when investing in emerging markets.
- -No single fund may exceed 50% of the portfolio. There is a maximum exposure of 50% to StocksPLUS, StocksPLUS Total Return and International StocksPLUS TR Strategy Funds combined. There is a maximum exposure of 75% to CommodityRealReturn Strategy, Real Return, Real Return II, Real Return Asset and RealEstateRealReturn Strategy Funds combined.
- -Leverage is permitted but is not expected to be used. Possible investment instruments are Stocks, Bonds, Currency, Commodities, Futures, Options, Options on Futures, and Swaps.
- -The Fund is expected to outperform the Lehman Brothers U.S. TIPS 1-10 Year Index and CPI + 5% over a market cycle. The PIMCO All Asset Fund is a daily valued commingled fund.

Sector Allocation

Regional Allocation

Source: Wellington

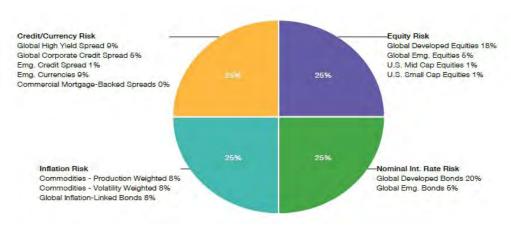

Wellington OIF

- -The objective of the Opportunistic Investment Allocation approach is to outperform core markets by making timely investments in non-core areas that are attractively valued, have positive structural tailwinds, or are expected to benefit from the anticipated cyclical environment. Opportunistic Investment Allocation is an unconstrained, non-benchmark oriented investment approach.
- -The Opportunistic Investment Allocation approach provides exposure to a variety of investment approaches that focus on non-core areas, such as non-US small cap, emerging markets equity, and sector funds. Non-core areas are inherently interesting as they are typically less efficient sectors of the market where active managers have a history of strong value added. However, a drawback to these investment areas is their high level of volatility. One source of high volatility is structural change, which results in instability of long-term performance characteristics. When performance characteristics are unstable over time it is difficult to address the asset class in a static long-term asset allocation policy. Assuming that historical performance characteristics are representative of future results often leads institutional investors to either buy these niche areas at high valuations (after positive structural surprises) or ignore (sell) them when they are out of favor (after a negative structural surprise). For these reasons, Wellington believes that allocations to these areas should not be strategic, but opportunistic in nature.

Source: AQR

AQR Global Risk Premium Fund

- -The AQR Global Risk Premium Fund is equally risk weighted between four major asset classes or risk exposures: equities, interest rates, inflation, and alternative risk exposures almost entirely spread/credit.
- -By diversifying broadly & globally across the broadest possible set of liquid risk-bearing assets, diversifying risk rather than capital avoiding risk concentration by sizing broad risk exposures equally, the strategy develops a an efficient portfolio that is likely to outperform traditional asset allocations.
- -Individual exposures are implemented through a variety of instruments, including: stock index futures and swaps, bond futures, interest rate swaps, global inflation-linked bonds, currency forwards, credit derivatives, and commodity futures & swaps.
- -Implementation decisions include capital usage, liquidity, transaction costs, and counterparty exposure. Since the strategy is levered, there is limited available capital; therefore, derivative instruments such as swaps and futures, will be preferred to physical investment in a market, all else being equal.
- -The majority of exposures are accessed synthetically generally, over 70% of the funds capital is invested in cash funds through SSgA and Dreyfus. These are money market funds meant to preserve capital, not meant to chase a spread above LIBOR as an additional source of return.
- -The fund attempts to maintain a healthy liquidity profile, both from a risk management standpoint and in order to fulfill the promise of monthly liquidity to investors.
- -Implementation with the most liquid instruments will be preferred and will help in limiting transaction costs.
- -Swap agreements and forwards take on counterparty risk. Counterparties are chosen based on analysis from a separate counterparty committee who determine approved counterparties across AQR's, limitations to exposures to each counterparty, as well as presenting AQR's credit worthiness to counterparties. Counterparty exposure is spread across several firms in order to minimize this risk.

Current Asset Allocation

Historical Sector Asset Allocation

Source: Schroder

Schroder Commodities

- -The objective of the Schroders Commodities strategy is to provide investors with a diversified exposure to the Commodities asset class, through investments in commodity futures and commodity related equities.
- -The strategy is a beta or beta-plus product and aims to use active management to exploit the inefficiencies inherent in the asset class.
- -Schroders uses an active, long-only approach to commodities management. No leverage is used and all futures positions are fully collateralized through investments in T-bills of less than one year maturity. As a result of this policy, cash and cash collateral are not subject to any duration or credit risk.
- -The strategy is benchmark unconstrained meaning investments are made based on in-house analysis and implemented when that analysis indicates an attractive risk/reward opportunity. Commodities are not included as a result of their weighting in an index. The focus of Schroders' fundamental commodity analysis is the determination of supply and demand and supply/demand balances and most importantly, how these balances may change in the future.
- -Quantitative, technical and sentiment analyses support the fundamental analysis in terms of the timing and sizing of positions.
- -The investment horizon for the strategy is three to 12 months.
- -Schroders utilize strict diversification rules. Commodities are reviewed on an ongoing basis. A commodity will not be held unless the fundamental analysis is positive.
- -The Schroders universe is comprised of over 60 commodities.
- -Most exposures are held through futures positions although equities may be purchased; typically whereby a commodity does not have an associated futures contract.

Morgan Stanley Prime Property

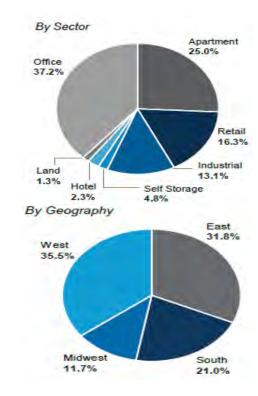

- -The Sponsor, on behalf of the Prime Property Fund, will endeavor to maintain a diversified investment in core U.S. real estate that offers stable, highly predictable cash flow returns. The focus is on high quality office buildings, Class A multifamily communities, warehouse distribution and storage facilities, and top tier super regional malls and shopping centers in targeted primary markets. The Sponsor favors investing in major metropolitan markets and selectively invests in secondary markets that are expected to achieve above-average economic performance. The Sponsor believes that these cities offer better liquidity, more diverse tenant bases and stronger resilience to market cycles.
- -The Sponsor maintains a strong research orientation and utilizes research as a risk mitigation tool. Research is used to assist in market selection, product selection and disposition, and portfolio weightings.
- -Although the methodologies used to determine strategies have remained constant over time, the investment strategy guidelines developed for PRIME have been modified from time to time over the past five years to reflect changes in market conditions and future market expectations.
- -Employment of these strategies have helped PRIME deliver strong relative returns including outperforming the NFI-ODCE benchmark over the trailing 1-year, 3-year, 5-year and 10-year periods

UBS Trumbull Property Fund

The UBS Trumbull Property Fund (UBS-TPF) is an actively managed core portfolio of equity real estate. The Fund seeks to provide attractive returns while limiting downside risk. The Fund has both relative and real return objectives. Its relative performance objective is to outperform the NFI-ODCE index over any given three-to five-year period. The Fund's real return performance objective is to achieve at least a 5% real rate of return (i.e., inflation-adjusted return), before advisory fees, over any given three- to five-year period.

² Reflects debt marked to market. Excludes debt held in unconsolidated joint ventures (related to Silicon Valley Portfolio & Domain Joint Ventures).

³ Date of first asset acquisition.

Grosvenor Institutional Partners, LP

-Generating consistent returns with low volatility and avoiding capital losses and headline risk, is the overall investment philosophy duly embedded in the business ethos of the firm. In enacting this philosophy, Grosvenor consciously pursues proven fundamentally driven strategies that are relatively liquid and have historically maintained a low correlation to traditional markets. However, Grosvenor avoids Macro/CTAs and some leveraged strategies. Low correlation and low volatility would necessarily imply a low equity beta (currently 0.2) Returns are targeted at T bills +5-10% with volatility in 6-7% range. It fears posting mediocre returns of 2-3% suggesting that Grosvenor values top line performance as much as managing volatility.

-Broadly speaking, the GIP portfolio can be visualized as 45% Long/Short equity, 40% fixed income and 15% opportunistic. Currently, the strategy allocation stands as: Equity Hedge 44%, Long/Short credit (incl. structured credit and distressed) 32%, Relative Value/Arbitrage 7%, Risk Arbitrage & Diversified Event 6%, Macro-oriented/vol. arbitrage and tail risk strategies 3%, Cash 8%.

-Grosvenor follows a conventional portfolio construction process which begins by setting investment objectives -returns, volatility and correlation estimatesand strategy constraints and manager limits. Concurrently, the investment committee outlines its broad investment themes in the context of a bigger opportunity set.

Permal Fixed Income Holdings

-PFIH is a global, multi-manager, multi-strategy diversified fixed income portfolio. Assets are invested in both credit (57%) and non-credit (41%) spread related strategies. Strategies in the credit spread portion are Developed Markets Fixed Income, Emerging Markets Fixed Income, and Hedged Fixed Income (managers that employ short positions). Strategies in the non-credit portion are Relative Value Arbitrage, Event-Driven, and Global Macro.

-The objective of PFIH is to deliver returns of 8-12% returns with 5-7% volatility. The fund typically invests with about 55-65 managers. Turnover is about 15%/year. This is lower (about 10%) within the group of established managers, and higher (30-35%) among new managers. Three of Permal's overriding philosophies are start small, diversify, and focus time and effort on existing positions.

Permal Fixed Income Holdings N.V.

GAM U.S. Institutional Diversity

- -The GAM Diversity strategy aims seeks to achieve absolute returns with diversification of risk and low correlation to traditional asset classes such as equities and bonds. GAM strategy targets net returns of 9-13% net per annum with 5-7% volatility and 0.2-0.6 correlation to the S&P 500 and 0.0-0.2 correlation to the Barclays Capital US Aggregate Bond Index.
- -The GAM portfolio construction process combines the structural discipline of clear return and risk targets with the bottom-up assessment of opportunity and risk across markets and strategies within a unified portfolio construction framework. GAM would not deviate from the portfolio construction process unless GAM felt the returns and risk characteristics being generated were not meeting GAM's expectations. If this were to happen GAM would take steps to reevaluate the process and make adjustments.
- -Asset allocation for GAM Multi-Manager's portfolios allows each investment manager to draw on the synthesized views of the specialist investment teams and apply them to his or her own portfolios as appropriate. The views of the specialist investment teams are formed and captured on a quarterly basis, when all senior Multi-Manager investment managers gather for the three-day Quarterly Investment Meeting (QIM). The purpose of the QIM is to review formally the prior quarter's investment results, assess opportunities and consider changes to strategic and tactical views.

^{***}Past Performance is not indicative of future results. Ratios are calculated based on a risk-free rate of 3.5% Actual ratios may vary depending on the actual risk-free rate and life of the fund***

Reporting Methodology

- The client's custodian bank is NEPC's preferred data source unless otherwise directed.
 NEPC reconciles custodian data to manager data. If the custodian cannot provide accurate data, manager data may be used.
- Trailing time period returns are determined by geometrically linking the holding period returns, from the first full month after inception to the report date. Rates of Return are annualized when the time period is longer than a year. Performance is presented gross and/or net of fees as indicated on each page.
- For managers funded in the middle of a month, the "since inception" return will start with the first full month, although actual inception dates and cash flows are taken into account in all Composite calculations.
- This report may contain forward-looking statements that are based on NEPC's estimates, opinions and beliefs, but NEPC cannot guarantee that any plan will achieve its targeted return or meet other goals.

Information Disclaimer

- Past performance is no guarantee of future results.
- All investments carry some level of risk. Diversification and other asset allocation techniques are not guaranteed to ensure profit or protect against losses.
- Some index returns displayed in this report or used in calculation of a policy, allocation or custom benchmark may not be available from the source or may be preliminary and subject to change.
- NEPC's source for portfolio pricing, calculation of accruals, and transaction information is
 the plans custodial bank. Information on market indices and security characteristics is
 received from other sources external to NEPC. While NEPC has exercised reasonable
 professional care in preparing this report, we cannot guarantee the accuracy of all source
 information contained within.
- This report is provided as a management aid for the client's internal use only. Performance contained in this report does not constitute a recommendation by NEPC.
- This report may contain confidential or proprietary information and may not be copied or redistributed to any party not legally entitled to receive it.
