Background:

Equity Style Spectrum analysis is employed in characterizing the investment approach of a managed equity portfolio. It further provides the means for grouping equity portfolios with similar investment styles. While no rule-based methodology can claim to capture all of the decisions made by an investment manager, the size of the firm in which a manager invests and the fundamental growth or value orientation of portfolio constituent holdings serve to explain a significant portion of fund performance.

Exhibits:

The intersection of Size (Y-axis) and Value/Growth (X-axis) coordinates drive equity style spectrum mappings on a nine-quadrant grid. Each of the nine quadrants is bounded by both a metric of size and a measure of value, growth or neutrality. The style map depicts the magnitude of an individual manager's style bias while similarly identifying style gaps and redundancies among multiple investment managers. As style bias is characterized at points in time over extended intervals, the style map similarly captures any "style drift" that may be exhibited.

While portfolio-level assignments are driven by a weighted-average calculation of constituent holding size and value/growth scores, the portfolio cross-sectional distribution of such scores is of additional interest. Consider, for example, that a Mid Cap assignment can result from holding either a portfolio that is concentrated exclusively in mid cap stocks or alternatively as a result of holding both large and small cap names. Similarly, a Core assignment can be accorded to a portfolio that is wholly comprised of constituent holdings that have no style bias (neutral) or equivalently by holding securities that carry both a growth and value bias in equal proportion.

Methodology:

Size scores for constituent holdings are identically the risk index exposure values for Size as obtained from BARRA's US-E3 Equity Risk Model. The log of market capitalization is, in turn, employed in deriving the risk index exposure value.

The Value/Growth score associated with a given portfolio is derived by way of a probabilistic assesment of the tendency toward value and growth exhibited by its constituent portfolio holdings. Value is characterized through an aggregation of BARRA US-E3 risk index exposures to Earnings Yield, Book/Price ratio and Dividend Yield, respectively. Growth is assessed through a consideration of exposure to the US-E3 Growth index.

Size quadrants are bounded per:

Small: Size Exposure < -1.90
Mid: -1.90 <= Size Exposure <= -1.00
Large: Size Exposure > -1.00

Value/Growth quadrants are bounded per:

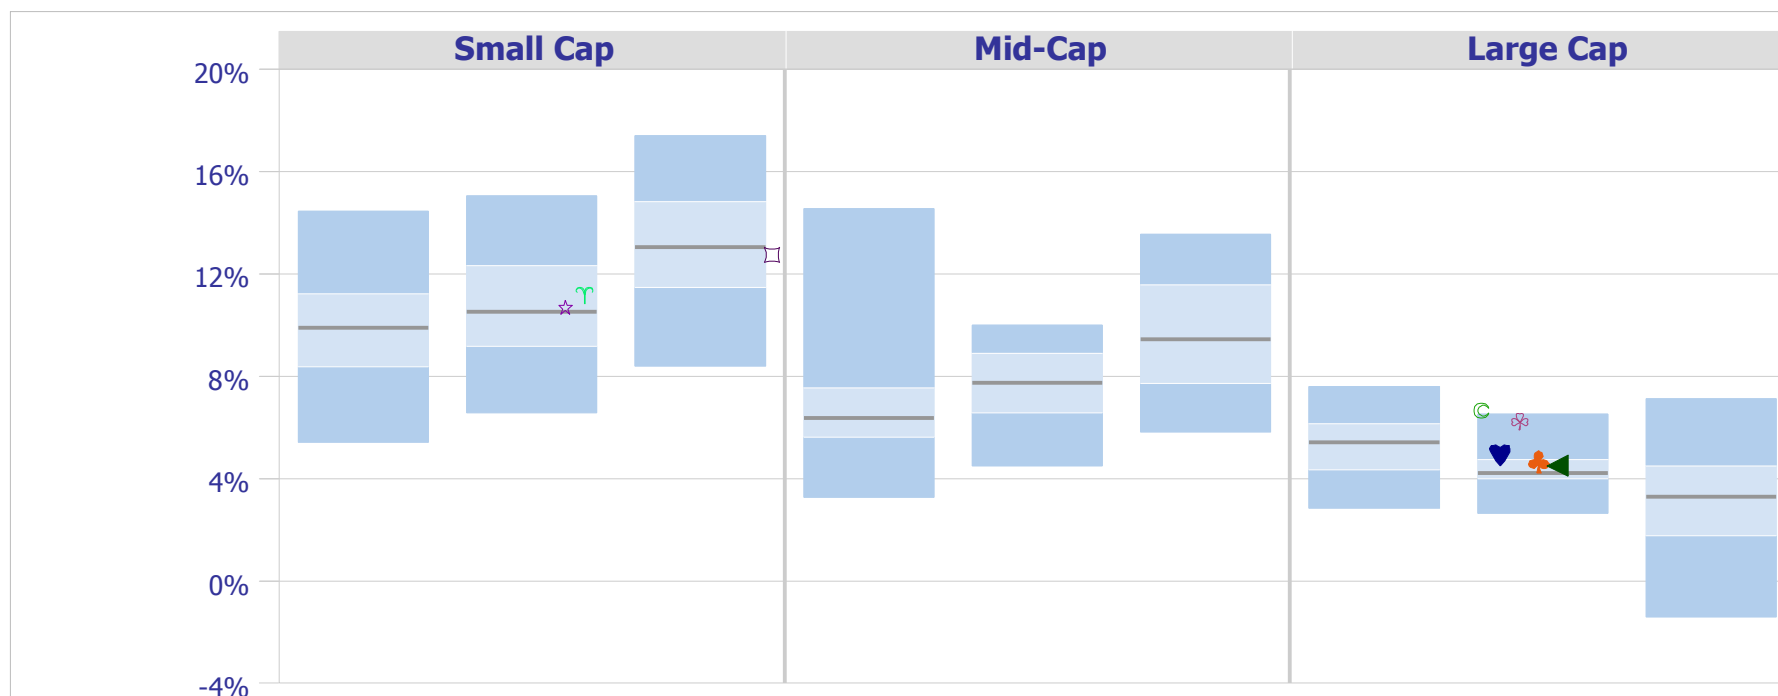

Value: Value/Growth Exposure < -0.15
Core: -0.15 <= Value/Growth Exposure <= 0.15
Growth: Value/Growth Exposure > 0.15

SHORT

Short Term Fixed Income managers are generally retained as "cash" managers. They provide an alternative to SHORT TERM INVESTMENT VEHICLES and attempt to add value through superior management of high quality short term instruments. In order to be classified as Short Term, a manager's portfolio duration should be 0-40% of the Lehman Brothers Aggregate's and an average quality rating of at least 6.3. Contractual restrictions limiting a short term fund's duration generally preclude the use of one of the major bond indices as a relevant benchmark. Instead, 90 day T-Bills are generally used as the portfolio's standard.

INTERMEDIATE

An Intermediate manager invests in high quality issues with a duration that is 40-80% of the Lehman Brothers Aggregate and an average quality rating of at least 6.3. Although many Intermediate managers are contractually prevented from extending a portfolio's maturity, other Intermediate managers assert that intermediate duration securities provide the best risk/reward trade-off relative to short and long duration instruments.

CORE

A Core manager differs from the Short, Intermediate, and Long styles in that he does not concentrate on achieving a superior return within a certain duration range. Instead, he prefers to emphasize sector or individual bond selection to create a portfolio whose duration is similar to the index's, but produces a superior return. A Core manager's defining criteria include a duration ranging from 80-120% of the Lehman Brothers Aggregate and an average quality rating of at least 6.3.

CORE PLUS

Core-plus fixed income management is a strategy of incorporating moderate allocations to nonbenchmark sectors in order to achieve excess return without taking on excessive additional risk. Core-plus portfolios typically include diversifying exposure to sovereign, high yield, and/or emerging market debt. Core-plus is an assigned style.

LONG

To be classified as a Long manager, an investment manager's portfolio must have a duration that is greater than 120% of the Lehman Brothers Aggregate's and an average quality rating of at least 6.3. Long managers believe that the increased return provided by the long end of the maturity spectrum compensates for the higher volatility of longer duration issues.

HIGH YIELD

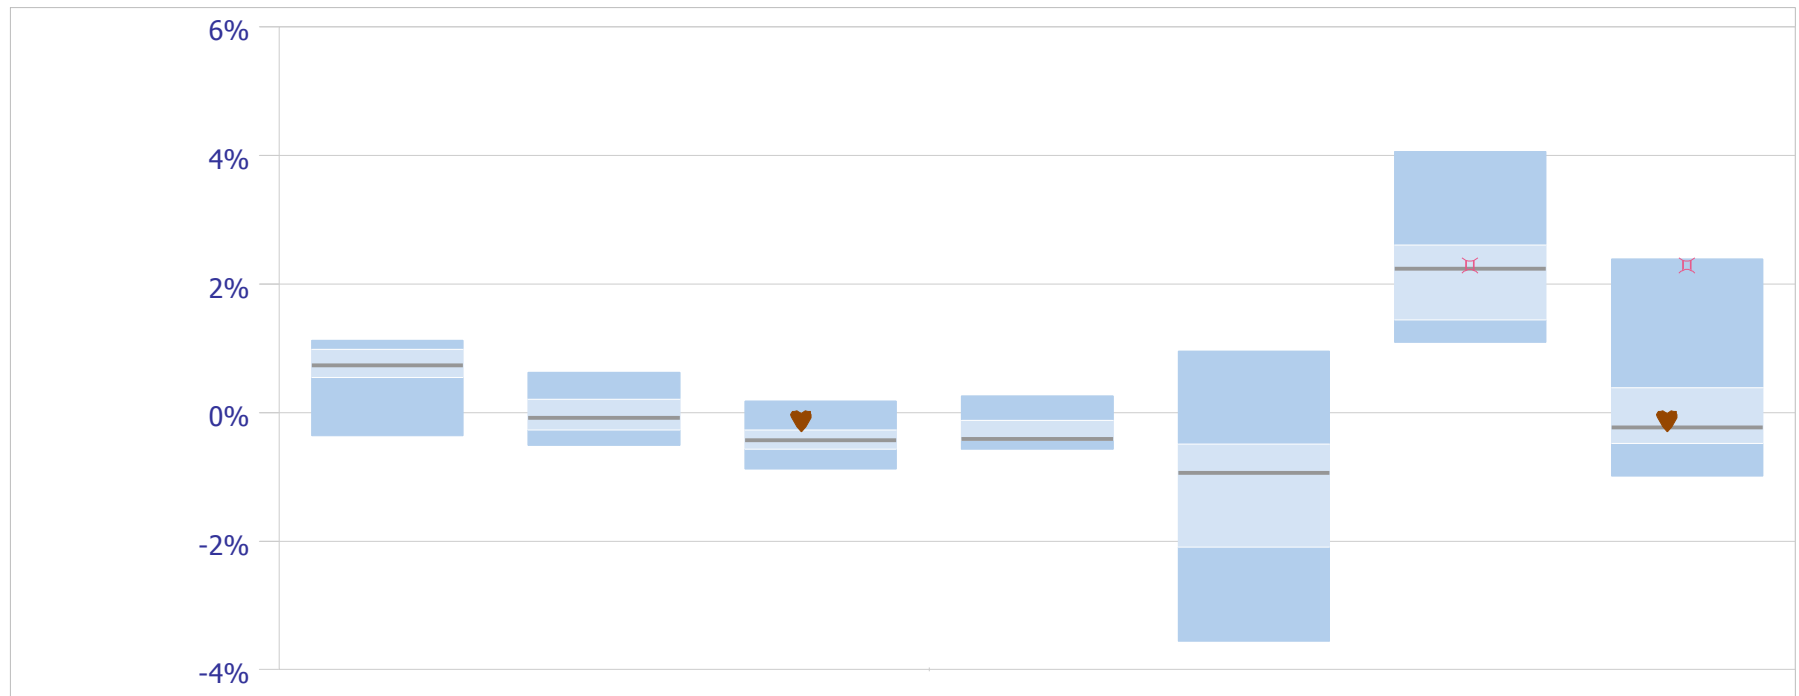

A High Yield Manager invests in lower quality, higher yielding issues; generally companies in financial difficulty or with limited financing means. The debt issued by these types of companies carry higher rates to compensate for the increased credit risk. A High Yield manager emphasizes security selection to take advantage of the superior return produced by the debt of less credit-worthy companies. A High Yield manager's portfolio must have a current yield to maturity that is at least 120% of the Lehman Brothers Aggregate's and an average quality rating less than or equal to 6.3.
