Board of Trustees
Vermont Municipal Employees' Retirement System
Montpelier, Vermont 05609

Dear Board of Trustees Members:

We are pleased to submit this Governmental Accounting Standards Board Statement No. 68 (GASB 68) Accounting Valuation for fiscal year ending June 30, 2024, for the Vermont Municipal Employees' Retirement System (VMERS), a cost-sharing multiple-employer defined benefit pension plan, based on a June 30, 2023, measurement date for employer reporting as of June 30, 2024. It contains various information that will need to be disclosed in order to comply with GASB 68. Please refer to the Vermont Municipal Employees' Retirement System Actuarial Valuation and Review as of June 30, 2022, dated October 25, 2022, for the data, assumptions, and plan of benefits underlying these calculations, except as noted herein.

This report has been prepared in accordance with generally accepted actuarial principles and practices at the request of the Board to assist the State in preparing its financial reports, based upon information provided by the Office of the State Treasurer. That assistance is gratefully acknowledged.

The measurements shown in this actuarial valuation may not be applicable for other purposes. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; and changes in plan provisions or applicable law.

The actuarial calculations were completed under the supervision of Matthew A. Strom, FSA, MAAA, EA, Enrolled Actuary. I am a member of the American Academy of Actuaries and I meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion herein. To the best of my knowledge, the information supplied in the actuarial valuation is complete and accurate. The investment return and inflation assumptions were selected by the Vermont Pension Investment Commission (VPIC). The remaining assumptions used in this actuarial valuation were selected by the Board of Trustees based upon my analysis and recommendations. In my opinion, the assumptions are reasonable and take into account the experience of VSTRS and reasonable expectations. In addition, in my opinion, the combined effect of these assumptions is expected to have no significant bias.

Section 1: Actuarial Valuation Summary

Purpose and basis

This report has been prepared by Segal to present certain disclosure information required by Governmental Accounting Standards Board Statement No. 68 (GASB 68) for the fiscal year ending June 30, 2024. This report is based on financial information as of June 30, 2023, and the Actuarial Valuation and Review as of June 30, 2022, dated October 25, 2022, which reflects:

- The benefit provisions of the Plan;
- The characteristics of covered active participants, inactive participants, and retired participants and beneficiaries as of June 30, 2022, provided by the Office of the State Treasurer;
- The assets of the Plan as of June 30, 2023, provided by the Office of the State Treasurer;
- Economic assumptions regarding future salary increases and investment earnings; and
- Other actuarial assumptions, regarding employee terminations, retirement, death, etc.

The assumptions are the same as shown in the Vermont Municipal Employees' Retirement System Actuarial Valuation Report as of June 30, 2022, except as noted herein. Total Pension Liability as of June 30, 2023, reflects changes to actuarial assumptions that were adopted as part of the Actuarial Experience Review dated September 18, 2023.

Highlights of the valuation

1. GASB 68 permits a measurement date as early as the end of the fiscal year prior to the reporting date. This report for the fiscal year ending June 30, 2024, uses a measurement date of June 30, 2023. The Net Pension Liability (NPL) measured as of June 30, 2023, and June 30, 2022, was determined based upon the results of the actuarial valuations as of June 30, 2022, and June 30, 2021, respectively, adjusted forward using standard actuarial techniques.
2. The NPL is equal to the difference between the Total Pension Liability (TPL) and the Plan Fiduciary Net Position (FNP). The FNP is equal to the market value of assets, and, therefore, the NPL measure is very similar to an Unfunded Actuarial Accrued Liability (UAL) on a market value basis. The NPL increased from \$303.4 million as of June 30, 2022, to \$320.3 million as of June 30, 2023, and the FNP as a percent of the TPL increased from 73.60% to 74.01%
3. The discount rate used to measure the TPL and NPL was 7.00% as of June 30, 2023, and June 30, 2022.

Section 1: Actuarial Valuation Summary

4. The annual pension expense arises from certain changes in the NPL and changes in outstanding balances of deferred outflows and deferred inflows of resources related to pensions from the beginning of the year to the end of the year. The pension expense increased from \$57.6 million for fiscal year ending June 30, 2023, to \$66.0 million for fiscal year ending June 30, 2024.
5. Based on several recent consolidations of employers, many employers are no longer acting as entities within the System and have had their Proportionate Share Allocation drop to 0.0%, while other employers have entered the System with relatively high Proportionate Share Allocations. These consolidations have created large, offsetting changes in proportion, to be recognized over future years as deferred inflows and outflows. The employers with no proportionate share will continue to have an Employer Pension Expense to be considered for accounting purposes until all outstanding deferred inflows and outflows have been recognized.

Section 1: Actuarial Valuation Summary

Important information about actuarial valuations

In order to prepare a valuation, Segal relies on a number of input items. These include:

Input Item	Description
Plan of benefits	Plan provisions define the rules that will be used to determine benefit payments, and those rules, or the interpretation of them, may change over time. Even where they appear precise, outside factors may change how they operate. It is important to keep Segal informed with respect to plan provisions and administrative procedures, and to review the plan summary included in our report to confirm that Segal has correctly interpreted the plan of benefits.
Participant data	An actuarial valuation for a plan is based on data provided to the actuary by the System. Segal does not audit such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.
Assets	The valuation is based on the market value of assets as of the valuation date, as provided by the System. For purposes of funding the plan, the System uses an “actuarial value of assets” that differs from market value to gradually reflect year-to-year changes in the market value of assets in determining the contribution requirements.
Actuarial assumptions	In preparing an actuarial valuation, Segal starts by developing a forecast of the benefits to be paid to existing plan participants for the rest of their lives and the lives of their beneficiaries. This requires actuarial assumptions as to the probability of death, disability, withdrawal, and retirement of participants in each year, as well as forecasts of the plan’s benefits for each of those events. In addition, the benefits forecasted for each of those events in each future year reflect actuarial assumptions as to salary increases and cost-of-living adjustments. The forecasted benefits are then discounted to a present value, typically based on an estimate of the rate of return that will be achieved on the plan’s assets. All of these factors are uncertain and unknowable. Thus, there will be a range of reasonable assumptions, and the results may vary materially based on which assumptions are selected within that range. That is, there is no right answer (except with hindsight). It is important for any user of an actuarial valuation to understand and accept this constraint. The actuarial model may use approximations and estimates that will have an immaterial impact on our results. In addition, the actuarial assumptions may change over time, and while this can have a significant impact on the reported results, it does not mean that the previous assumptions or results were unreasonable or wrong.
Actuarial models	Segal valuation results are based on proprietary actuarial modeling software. The actuarial valuation models generate a comprehensive set of liability and cost calculations that are presented to meet regulatory, legislative and client requirements. Our Actuarial Technology and Systems unit, comprised of both actuaries and programmers, is responsible for the initial development and maintenance of these models. The models have a modular structure that allows for a high degree of accuracy, flexibility and user control. The client team programs the assumptions and the plan provisions, validates the models, and reviews test lives and results, under the supervision of the responsible actuary.

Section 1: Actuarial Valuation Summary

The user of Segal's actuarial valuation (or other actuarial calculations) should keep the following in mind:

- The actuarial valuation is prepared at the request of the Vermont Municipal Employees' Retirement System. Segal is not responsible for the use or misuse of its report, particularly by any other party.
- An actuarial valuation is a measurement of the Plan's assets and liabilities at a specific date. Accordingly, except where otherwise noted, Segal did not perform an analysis of the potential range of future financial measures. The actual long-term cost of the Plan will be determined by the actual benefits and expenses paid and the actual investment experience of the Plan.
- Actuarial results in this report are not rounded, but that does not imply precision.
- If the System is aware of any event or trend that was not considered in this valuation that may materially change the results of the valuation, Segal should be advised so that we can evaluate it.
- Segal does not provide investment, legal, accounting, or tax advice and is not acting as a fiduciary to the Plan. This valuation is based on Segal's understanding of applicable guidance in these areas and of the Plan's provisions, but they may be subject to alternative interpretations. The System should look to their other advisors for expertise in these areas.

Actuarial assumptions. The TPL as of June 30, 2023, which was determined based on the results of an actuarial valuation as of June 30, 2022, used the following actuarial assumptions, applied to all periods included in the measurement:

Assumption Type	Assumption
Salary increases	Ranging from 4.07% to 6.21% based on service
Net investment rate of return	7.00%, net of pension plan investment expenses, including inflation
Cost-of-living adjustment	Ranging from 1.10% to 3.00% based on group
Mortality	<ul style="list-style-type: none"> • Pre-Retirement: <ul style="list-style-type: none"> – Groups A/B – 60% PubG-2010 General Employee Amount-Weighted Below-Median and 40% of PubG-2010 General Employee Amount-Weighted, with generational projection using Scale MP-2021. – Group C – PubG-2010 General Employee Amount-Weighted, with generational projection using scale MP-2021. – Group D – PubS-2010 Public Safety Employee Amount-Weighted Below-Median, with generational projection using scale MP-2021.

* These funded percentages are not necessarily appropriate for assessing the sufficiency of Plan assets to cover the estimated cost of settling the Plan's benefit obligation or the need for or the amount of future contributions.

Section 2: GASB Information

Assumption Type	Assumption
Mortality (continued)	<ul style="list-style-type: none"> • Retiree Healthy Post-Retirement: <ul style="list-style-type: none"> – Groups A/B – PubG-2010 General Healthy Retiree Amount-Weighted Below Median Table with credibility adjustments of 90% and 87% for the Male and Female tables, respectively, with generational projection using scale MP-2021. – Group C – PubG-2010 General Healthy Retiree Amount-Weighted Table, with generational projection using scale MP-2021. – Group D – PubS-2010 Public Safety Retiree Amount-Weighted Below-Median Table, with generational projection using scale MP-2021. • Beneficiary Healthy Post-Retirement: <ul style="list-style-type: none"> – Pub-2010 Contingent Survivor Amount-Weighted Below-Median Table, with generational projection using scale MP-2021. • Disabled Post-Retirement: <ul style="list-style-type: none"> – Group A/B/C – PubNS-2010 Non-Safety Disabled Retiree Amount-Weighted Table with generational projection using Scale MP-2021. – Group D – PubS-2010 Safety Disabled Retiree Amount-Weighted Table with generational projection using Scale MP-2021. • The tables with the generational projection to the ages of members as of the measurement date reasonably reflect the mortality experience of the System as of the measurement date. The mortality rates were based on historical and current demographic data, adjusted to reflect health characteristics of the underlying groups and estimated future experience and professional judgment. The mortality tables were then adjusted to future years using the generational projection to reflect future mortality improvement between the measurement date and those years.

Detailed information regarding all actuarial assumptions can be found in the June 30, 2023, Actuarial Valuation and Review.

Section 2: GASB Information

Determination of discount rate and investment rates of return

The long-term expected rate of return on pension plan investments was determined using a building-block method in which expected future real rates of return (expected returns, net of inflation) are developed for each major asset class. These returns are combined to produce the long-term expected rate of return by weighting the expected future real rates of return by the target asset allocation percentage and adding expected inflation. The target allocation and projected arithmetic real rates of return for each major asset class, after deducting inflation, but before investment expenses, used in the derivation of the long-term expected investment rate of return assumption are summarized in the following table:

Asset Class	Target Allocation	Long-Term Expected Real Rate of Return*
Global Equities	44.00%	5.35%
Private Equity	10.00%	7.50%
Emerging Market Debt	2.00%	5.00%
Private and Alternative Credit	10.00%	5.50%
Non-Core Real Estate	4.00%	5.50%
Core Fixed Income	19.00%	1.50%
Core Real Estate	4.00%	3.25%
US TIPS	2.00%	1.50%
Infrastructure/Farmland	5.00%	4.25%
Total	100.00%	

* Calculated as the Arithmetic Rates of Return minus the Rate of Inflation, as provided by the Vermont State Treasurers' Office

Section 2: GASB Information

Discount rate. The long-term expected rate of return on pension plan investments is 7.00%. The high quality tax-exempt general obligation municipal bond rate (20-Bond GO Index) as of the closest date prior to the valuation date of June 30, 2023, is 3.65%, as published by The Bond Buyer.

The discount rate used to measure the Total Pension Liability was 7.00% as of June 30, 2023. The projection of cash flows used to determine the discount rate assumed plan member and employer contributions will be made at rates set by the Board (employers) and statute (members). For this purpose, only employer contributions that are intended to fund benefits of current plan members and their beneficiaries are included. Projected employer contributions that are intended to fund the service costs of future plan members and their beneficiaries, as well as projected contributions from future plan members, are not included. Based on those assumptions, the pension plans' Fiduciary Net Position was projected to be available to make all projected future benefit payments of current plan members as of June 30, 2023. Therefore, the long-term expected rate of return on pension plan investments was applied to all periods of projected benefit payments to determine the Total Pension Liability.

Discount rate sensitivity

Sensitivity of the Net Pension Liability to changes in the discount rate. The following presents the NPL as of June 30, 2023, calculated using the discount rate of 7.00%, as well as what the NPL would be if it were calculated using a discount rate that is 1-percentage-point lower (6.00%) or 1-percentage-point higher (8.00%) than the current rate.

Item	1% Decrease (6.00%)	Current Discount Rate (7.00%)	1% Increase (8.00%)
Net Pension Liability as of June 30, 2023	\$482,091,663	\$320,293,753	\$187,302,206

^{*} Actuarially determined contributions for a given fiscal year are based on results from the June 30 actuarial valuation one year prior.

^{**} Includes a portion of the contribution amount denoted as "other" in Exhibit 2.

^{***} The June 30, 2015 actuarial valuation was not published, therefore, an actuarially determined contribution as not calculated for year ended June 30, 2016.

Section 2: GASB Information

Methods and assumptions used to determine contribution rates for the year ended June 30, 2023:

Valuation date

Actuarially determined contribution for the year ending June 30, 2023, is based on results from the June 30, 2022, actuarial valuation, and was calculated as of June 30, with appropriate interest to the middle of the fiscal year.

Actuarial cost method

Entry Age Normal actuarial cost method

Amortization method

Amortization payments calculated to fully fund unfunded actuarial accrued liability with annual increases of 3% over a closed period.

Remaining amortization period

16 years as of July 1, 2022

The amortization of unfunded actuarial accrued liability (UAAL) within the actuarially determined contribution rate calculation is based on the level percentage of pay required to amortize the UAAL over the 30-year closed period that began July 1, 2008.

Asset valuation method

A smoothing method is used, under which the value of assets for actuarial purposes equals market value less a five-year phase-in of the differences between actual and assumed investment return. The value of assets for actuarial purposes may not differ from market value of assets by more than 20%.

Investment rate of return

7.00%, net of pension plan investment expenses, including inflation.

Inflation rate

2.30%

Section 2: GASB Information

Projected salary increases

Varying service-based rates from 0-10 years of service, then a single rate of 4.50% (includes assumed inflation rate of 2.30%) for all subsequent years.

Mortality

Pre-retirement participants:

- Groups A/B/C
 - 40% PubG-2010 General Employee Amount-Weighted below-median and 60% of PubG-2010 General Employee Amount-Weighted, with generational projection using Scale MP-2019.
- Group D
 - PubG-2010 General Employee Amount-Weighted above-median, with generational projection using scale MP-2019.

Healthy post-retirement – retirees:

- Groups A/B/C
 - 104% of 40% PubG-2010 General Healthy Retiree Amount-Weighted below-median and 60% of PubG-2010 General Healthy Retiree Amount-Weighted, with generational projection using scale MP-2019.
- Group D
 - PubG-2010 General Healthy Retiree Amount-Weighted, with generational projection using scale MP-2019.

Healthy post-retirement – beneficiaries:

- Groups A/B/C
 - 70% Pub-2010 Contingent Survivor Amount-Weighted below-median and 30% of Pub-2010 Contingent Survivor Amount-Weighted, with generational projection using scale MP-2019.
- Group D
 - Pub-2010 Contingent Survivor Amount-Weighted, with generational projection using scale MP-2019.

Disabled post-retirement:

- All Groups
 - PubNS-2010 Non-Safety Disabled Retiree Amount-Weighted Mortality Table with generational projection using Scale MP-2019.

Section 2: GASB Information

The tables with the generational projection to the ages of members as of the measurement date reasonably reflect the mortality experience of the System as of the measurement date. The mortality rates were based on historical and current demographic data, adjusted to reflect health characteristics of the underlying groups and estimated future experience and professional judgment. The mortality tables were then adjusted to future years using the generational projection to reflect future mortality improvement between the measurement date and those years.

Other information

Same as those used in the June 30, 2022, funding actuarial valuation.

Section 3: Actuarial Assumptions and Methods

Exhibit A: Actuarial assumptions, actuarial cost method and models

Rational for assumptions

The information and analysis used in selecting each assumption that has a significant effect on this actuarial valuation is shown in the Actuarial Experience Review dated September 18, 2023 (as prepared by Segal) and in the Economic Experience Study (as prepared by the Gabriel Roeder Smith actuarial consulting firm) adopted by the Vermont Pension Investment Commission during their meeting on July 25, 2023.

Roll-forward techniques

The results as of June 30, 2023, are based on the results of the Vermont Municipal Employees' Retirement System Actuarial Valuation Report as of June 30, 2022, adjusted forward, using standard actuarial techniques. Total Pension Liability as of June 30, 2023, reflects changes to actuarial assumptions that were adopted as part of the Actuarial Experience Review dated September 18, 2023.

Inflation

2.30%

Investment return

7.00%

The investment return assumption is a long-term estimate derived from historical data, current and recent market expectations, and professional judgment. As part of the analysis, a building block approach was used that reflects inflation expectations and anticipated risk premiums for each of the portfolio's asset classes, as well as the System's target asset allocation.

Cost-of-Living Adjustments (COLA)

Assumed to occur on January 1 following one year of retirement at the rate of 1.10% per annum for Group A members and 1.20% per annum for Groups B, C and D members (beginning at Normal Retirement eligibility age for members who elect reduced early retirement, at age 62 for members of Groups A, B, and D who receive a disability retirement benefit, and at age 55 for members of Group C who receive a disability retirement benefit). The January 1, 2024, COLA is expected to be 1.10% for Group A and 1.10% for Groups B, C, and D. The January 1, 2023, COLAs were 2.00% for Group A and 3.00% for Groups B, C, and D.

Mortality rates

Pre-retirement

- **Groups A/B**
 - 60% PubG-2010 General Employee Amount-Weighted Below-Median and 40% of PubG-2010 General Employee Amount-Weighted, with generational projection using Scale MP-2021.
- **Group C**
 - PubG-2010 General Employee Amount-Weighted, with generational projection using scale MP-2021.

Section 3: Actuarial Assumptions and Methods and Appendices

- **Group D**

- PubS-2010 Public Safety Employee Amount-Weighted Below-Median, with generational projection using scale MP-2021.

Healthy post-retirement - Retirees

- **Groups A/B**

- PubG-2010 General Healthy Retiree Amount-Weighted Below Median Table with credibility adjustments of 90% and 87% for the Male and Female tables, respectively, with generational projection using scale MP-2021.

- **Group C**

- PubG-2010 General Healthy Retiree Amount-Weighted Table, with generational projection using scale MP-2021.

- **Group D**

- PubS-2010 Public Safety Retiree Amount-Weighted Below-Median Table, with generational projection using scale MP-2021.

Healthy post-retirement - Beneficiaries

- **All Groups**

- Pub-2010 Contingent Survivor Amount-Weighted Below-Median Table, with generational projection using scale MP-2021.

Disabled post-retirement

- **Groups A/B/C**

- PubNS-2010 Non-Safety Disabled Retiree Amount-Weighted Table with generational projection using Scale MP-2021.

- **Group D**

- PubS-2010 Safety Disabled Retiree Amount-Weighted Table with generational projection using Scale MP-2021.

The tables with the generational projection to the ages of members as of the measurement date reasonably reflect the mortality experience of the System as of the measurement date. The mortality rates were based on historical and current demographic data, adjusted to reflect health characteristics of the underlying groups and estimated future experience and professional judgment. The mortality tables were then adjusted to future years using the generational projection to reflect future mortality improvement between the measurement date and those years.
